WELCOME TO THE ZOOM WEBINAR

The screenshot shows a Zoom webinar interface. The main video area is black. On the right, there is a 'Zoom Group Chat' panel. In the bottom toolbar, the 'Join Audio' button is circled in orange, with an arrow pointing to the text 'If you are unable to hear, connect your speakers by selecting "Join Audio"'. Another arrow points from the 'Chat' button in the toolbar to the chat panel, which contains the text 'Please use the chat box to introduce yourselves and share thoughts and comments by sending a message to "All panelists and attendees"'. The chat panel also shows a dropdown menu with 'To: All panelists and attendees' selected and a text input field 'Type message here ...'.

If you are unable to hear, connect your speakers by selecting "Join Audio"

Please use the chat box to introduce yourselves and share thoughts and comments by sending a message to "All panelists and attendees"

For a better Zoom Webinar Experience, download the Zoom app to your device at <https://zoom.us/support/download>

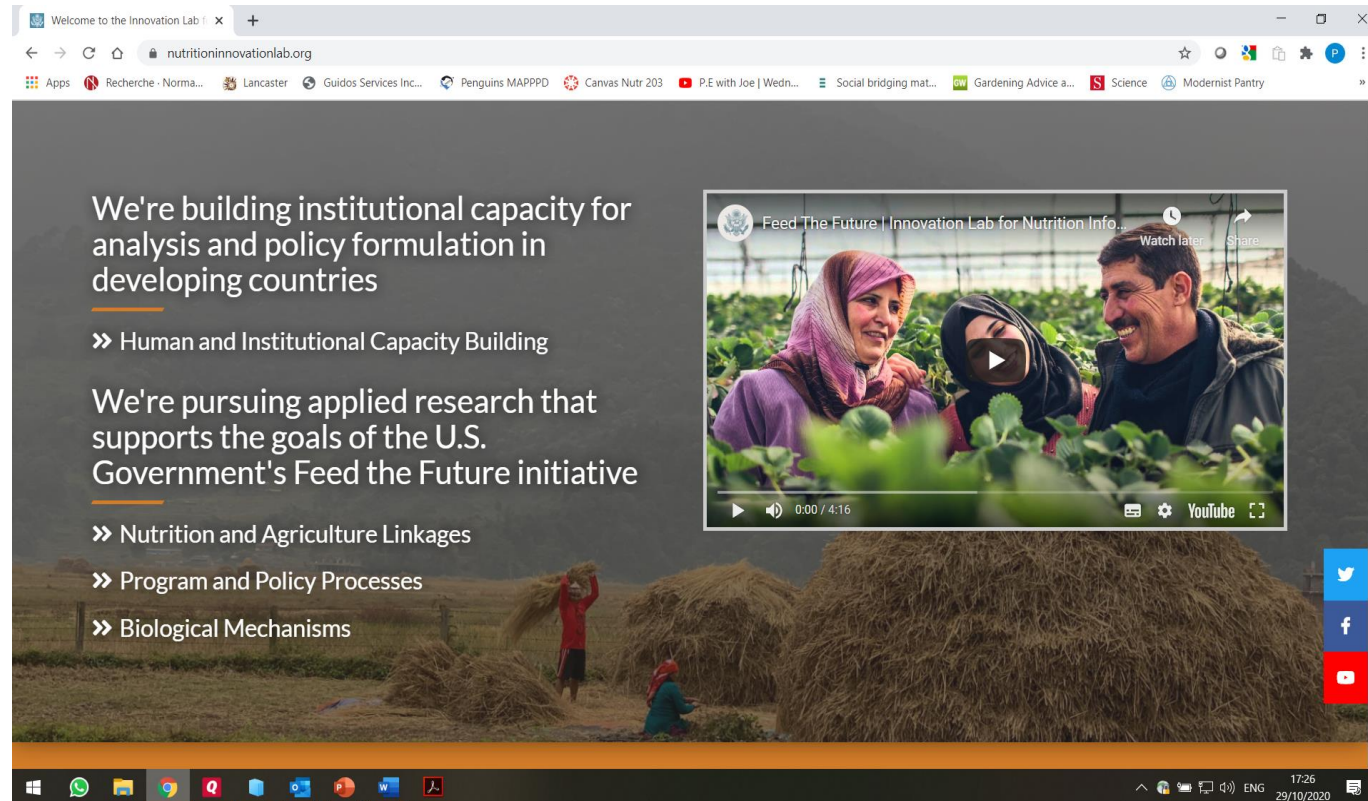

Q&A AND CHAT

Submit your questions for the panelists in the Q&A box

If you're having any technical difficulties, please send a message to "All panelists" via the chat box and we will do our best to help resolve your issue

The screenshot displays a Zoom meeting interface. On the left, a large black area contains the text "Submit your questions for the panelists in the Q&A box" in orange. In the center, a white "Q&A" window is open, showing a "Welcome" message and a text input field labeled "Type your question here...". At the bottom of the Zoom window, the "Q&A" icon is circled in orange, with an arrow pointing to the Q&A window. On the right, a "Zoom Group Chat" window is open, showing a message from "All panelists" and a text input field labeled "Type message here ...". The "To:" dropdown menu is open, showing "All panelists" selected. A blue circle highlights the "To:" dropdown and the input field, with an arrow pointing to the text "If you're having any technical difficulties, please send a message to 'All panelists' via the chat box and we will do our best to help resolve your issue".

FEED THE FUTURE INNOVATION LAB FOR NUTRITION

The screenshot shows a web browser window with the URL nutritioninnovationlab.org. The page features a dark background with white text. On the left, there is a main heading and two bulleted points. On the right, there is a video player showing a group of people in a field. Below the video player, there are social media icons for Twitter, Facebook, and YouTube. The bottom of the browser window shows the Windows taskbar with various application icons and the system clock.

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Aflatoxin Background

- Type of mycotoxin, produced by the mold *Aspergillus*
- Colorless and odorless (mold is green color)
- Contaminate staple crops such as maize, groundnuts, and cassava
- Cause liver cancer and may be associated with stunting
- May impair absorption of nutrients critical for normal child growth and development

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Research Theme: Neglected Biological Mechanisms

To contribute to a better understanding of the mycotoxin-stunting relationship, the Feed the Future Nutrition Innovation Lab has implemented several studies to explore the relationship to mycotoxins, with a focus on early life nutrition

- Aflatoxin Study (Northern Mozambique- 10 districts of Nampula province)
- Gulu Cohort: HIV, Food Security in pregnancy (Northern Uganda)
- Birth Cohort Uganda (Northern and South West Uganda)
- Alfatoxin in pregnancy and birth outcomes (Greater Kampala area, Uganda)
- AflaCohort Study (Banke district, Terai- Nepal)

GERALD J. AND DOROTHY R.
Friedman School of
Nutrition Science and Policy

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Rationale

- Significant negative association between aflatoxin exposure and linear growth – in Benin and Togo (Gong et al. 2002 BMJ; 325)
- Presence of aflatoxin B1 in pregnancy in Ghana and adverse birth outcomes (Shuaib et al. 2010 Tropical Medicine and International Health, 15:2 160-167)
- Aflatoxin levels in pregnancy associated with adverse birth outcomes in Uganda (Lauer et al, 2019, MCN; 15:2)
- Relationship in pregnancy and birth outcomes even at low levels of aflatoxin observed in Nepal (Andrews-Trevino et al, 2019, *The Journal of Nutrition*, Volume 149, Issue 10, October 2019, Pages 1818–1825)

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Rationale

- Relationships observed in Sub-Saharan Africa and South Asia
- Variability of the relationship (in pregnancy, in under 2s, in under five) in different populations
- Conflicting evidence of the relationship in Nepal (Mitchell et al. 2016, Journal of Exposure Science and Environmental Epi, 1-6)
- RCT on maize grain replacement in Kenya: impact being primarily on younger children (Hoffman et al. 2018- BMJ Global Health)

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Rationale for Study in Nampula

- High rate of stunting in Nampula province (55% of children under five)
- Population highly dependent on crops such as maize and groundnuts
- Previous assessment of crops and soil levels in Nampula province has shown aflatoxin contamination

GERALD J. AND DOROTHY R.
Friedman School of
Nutrition Science and Policy

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Study Objectives

1. Assess the mean serum aflatoxin in children 6-23 months and 24-59 months of age
2. Examine differences in serum aflatoxin (mean) by age group
3. Enumerate the association between serum aflatoxin and linear growth (HAZ) adjusting for confounders

Study Methods

- [illegible]

GERALD J. AND DOROTHY R.
Friedman School of
Nutrition Science and Policy

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Ethical Approval, Sensitization, and Mobilization

- The study was approved by UniLurio Bioethics Board and National Bio-ethics committee (CNBS) and by the Institutional Review Board at Tufts University
- Sensitization of Central hospital, provincial (DPS) and district officials (all 10 districts) through:
 - One on one interactions: provincial level
 - District visits
 - Health facility mapping
 - Launch Event
 - Community Sensitization : Lead team visits prior to data collection
 - Community radio
- At data collection: Informed consent process, caregivers requested to participate in study

GERALD J. AND DOROTHY R.
Friedman School of
Nutrition Science and Policy

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Household Data Collection (at Household)

Respondent	Module	Topic
Female caregiver or mother of selected child or children	A	Household identification and household member information
	C	Diet of caregiver and child/children, household food security
	D	Child feeding practices and health
	E	Water, hygiene, and sanitation
	H	Social participation
Household head	B	Agricultural production
	F	Socioeconomic characteristics
	G	Access to durable goods

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Nutritional and Biomarker Data Collection at Health facility

Exclusion:

- Children with severe acute malnutrition (MUAC < 11.5 cm) were not enrolled in the study
- Children with severe anemia (< 7 g/dl Hb) did not have blood drawn

Data Collection:

- Anthropometry: weight, length/height, MUAC, head circumference, knee-heel length
- One venous blood draw by Central Hospital technicians
- Anemia (HemoCue 301 analyzer) and malaria (Rapid Diagnostic Test) assessment

Referral: Children with SAM, anemia, and diagnosed with malaria were referred to the health facility staff and treatment was provided

Biomarker processing:

- Sample processing and handling by Central Hospital Nampula technicians
- Storage in -80 freezer in Nampula and transport to the United States
- Serum aflatoxin analysis using HPLC using validated lab protocols (University of Georgia, USA)

GERALD J. AND DOROTHY R.
Friedman School of
Nutrition Science and Policy

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Data Management, Calculations, and Analysis

- Data were collected electronically, transferred to database (Tufts server), and cleaned daily
- Data cleaning, sample weight computation
- Variable generation and computations
 - Anthropometric Z-scores computed using WHO reference standards
 - Prevalence of stunting and underweight
 - Diet diversity, household food insecurity
 - Agricultural production and practices
- Statistical analysis
 - Descriptive statistics
 - Bi-variate analysis
 - Multi-variable analysis: ordinary least square and logistic regressions
 - Adjusted for sample weights and clustering (EAs) to make findings representative of children in 10 districts

GERALD J. AND DOROTHY R.

Household Food Security

Assessed using the Household Food Insecurity Access Scale

FEED THE FUTURE

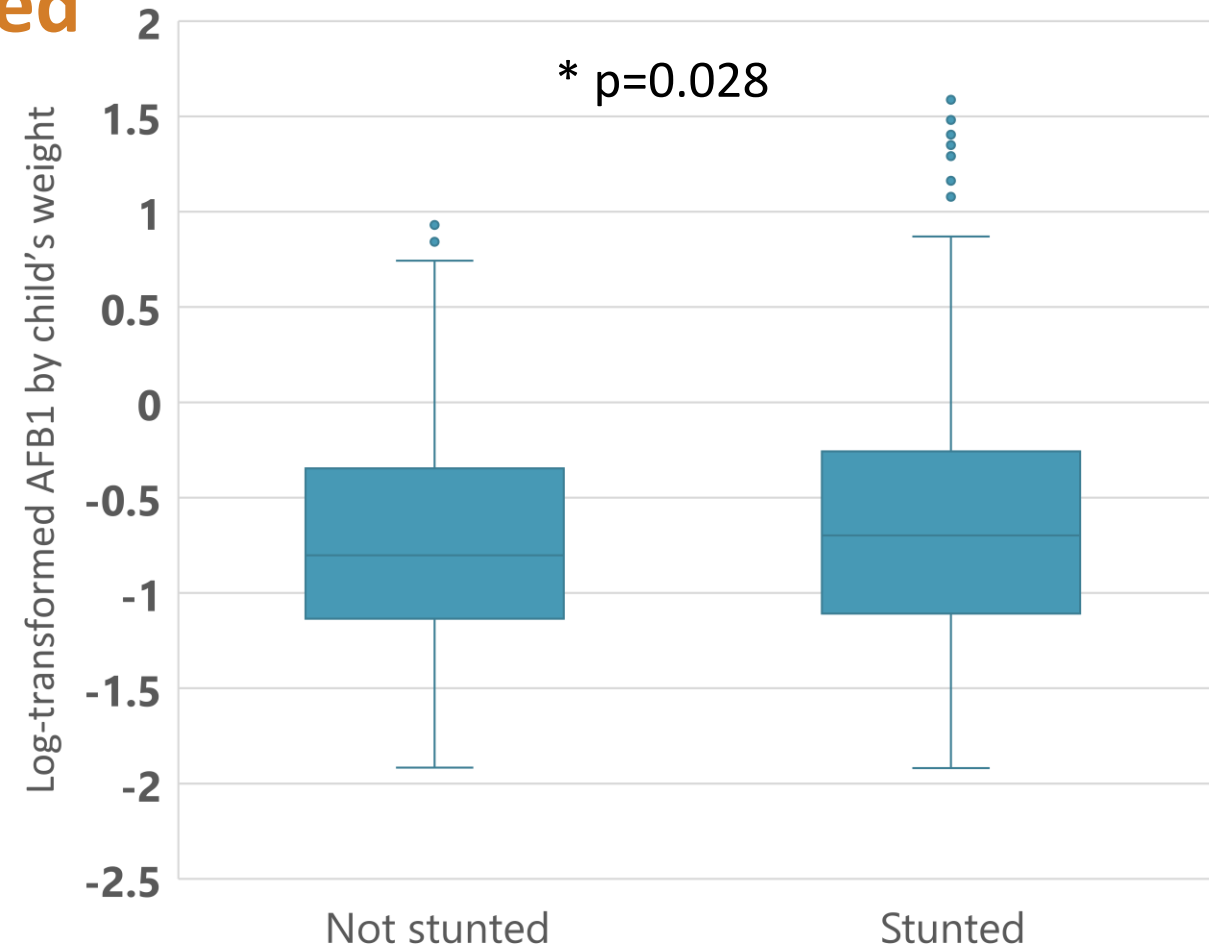

The U.S. Government's Global Hunger & Food Security Initiative

Stunting and Aflatoxin are Associated

	Odds Ratio
Log-transformed AFB1 by child's weight	1.60 *
n	894

A child was **60% more likely to be stunted** with every unit increase in logged aflatoxin level standardized by child's weight.

Logistic regression model adjusted for clustering, anemia, WHZ, age, age², sex, and detectable AFB1.

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

HAZ and Aflatoxin are Associated

$\beta = -0.234, p = 0.029$

An increase in one unit of AFB1 adjusted for child's body weight is associated with a 0.23 decrease in HAZ

Ordinary Least Squares model adjusted for clustering, anemia, WHZ, age, age², sex, and detectable AFB1.

Aflatoxin Associations by Age Group

- HAZ is associated
 - with AFB1 in children 24 to 59 months of age ($\beta=-0.29$, $p=0.007$)
 - but not children 6 to 23 months of age
- Stunting is associated
 - with AFB1 in children 24 to 59 months of age (OR=1.67, $p=0.011$)
 - but not children 6 to 23 months of age

FEED THE FUTURE

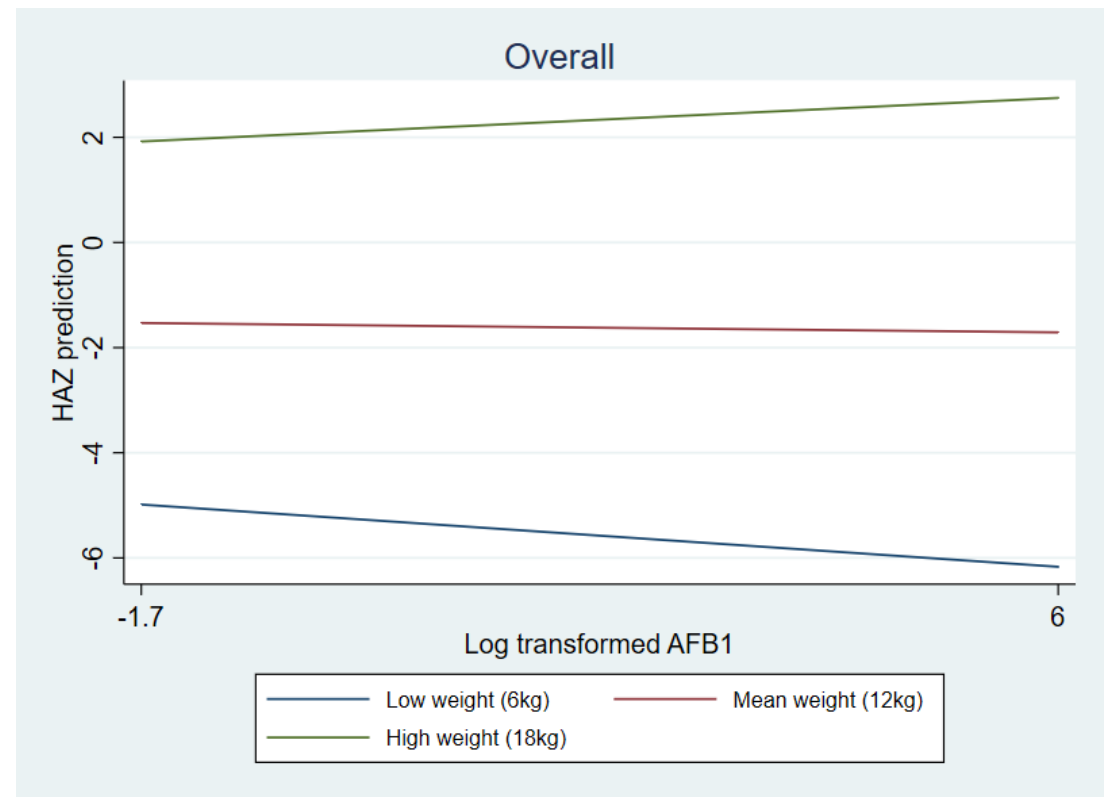

The U.S. Government's Global Hunger & Food Security Initiative

HAZ-Aflatoxin Relationship Varies by Child's Weight

Different relationships are predicted at different weights (on entire study sample):

- Positive HAZ-AFB1 association for children with high weight
- No association at average weight
- Negative HAZ-AFB1 association for children with low weight

However, this relationship is further complicated by age

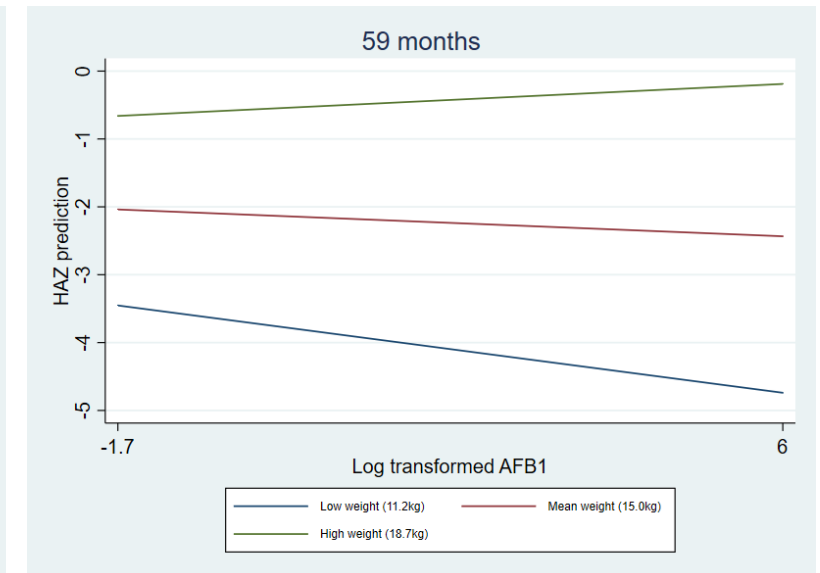

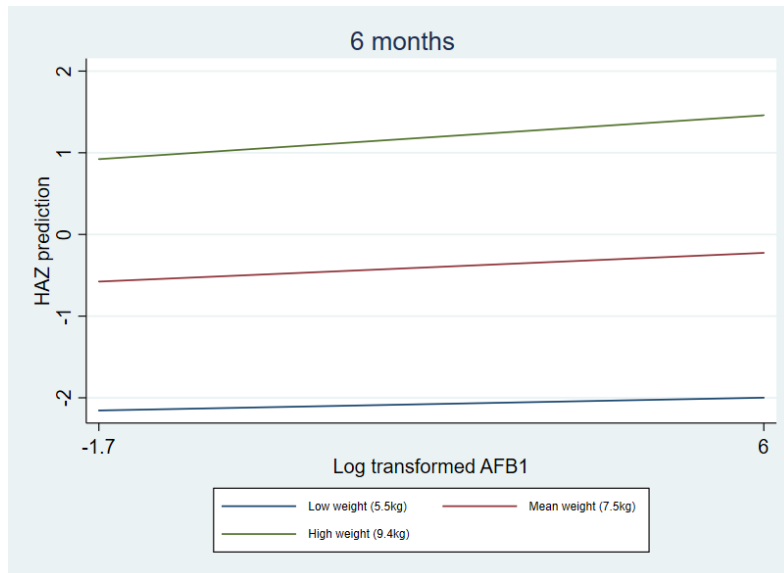

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

HAZ-Aflatoxin Relationship Varies by Weight and Age

Different relationships are observed when the predictions are conducted at specific ages

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Consuming Aflatoxin-Prone Foods is Associated with Increased Blood Aflatoxin Level

Consumption in past 24 hours of all three foods.

Ordinary Least Squares model adjusted for clustering, WHZ, age, meeting minimum dietary diversity, wealth, and detectable AFB1.

Nutrition Science and Policy

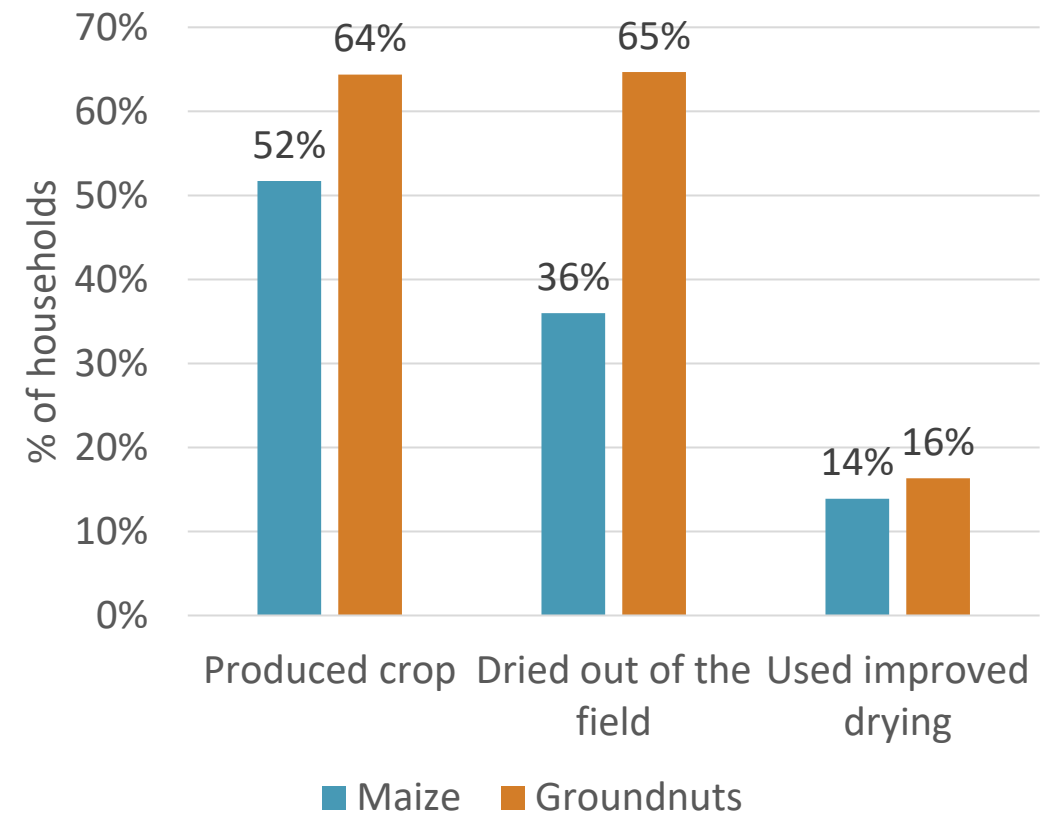

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Agricultural Practices

- **Drying location**
 - In the field only
 - Outside of the field (includes those that also dried in the field)
- **Drying method**
 - **Improved methods:** with fans, on platforms or plastic sheets, hung under roof or in kitchen
 - **Unimproved methods:** drying only in the field, spreading directly on dirt, cement, or brick floor, or on roof

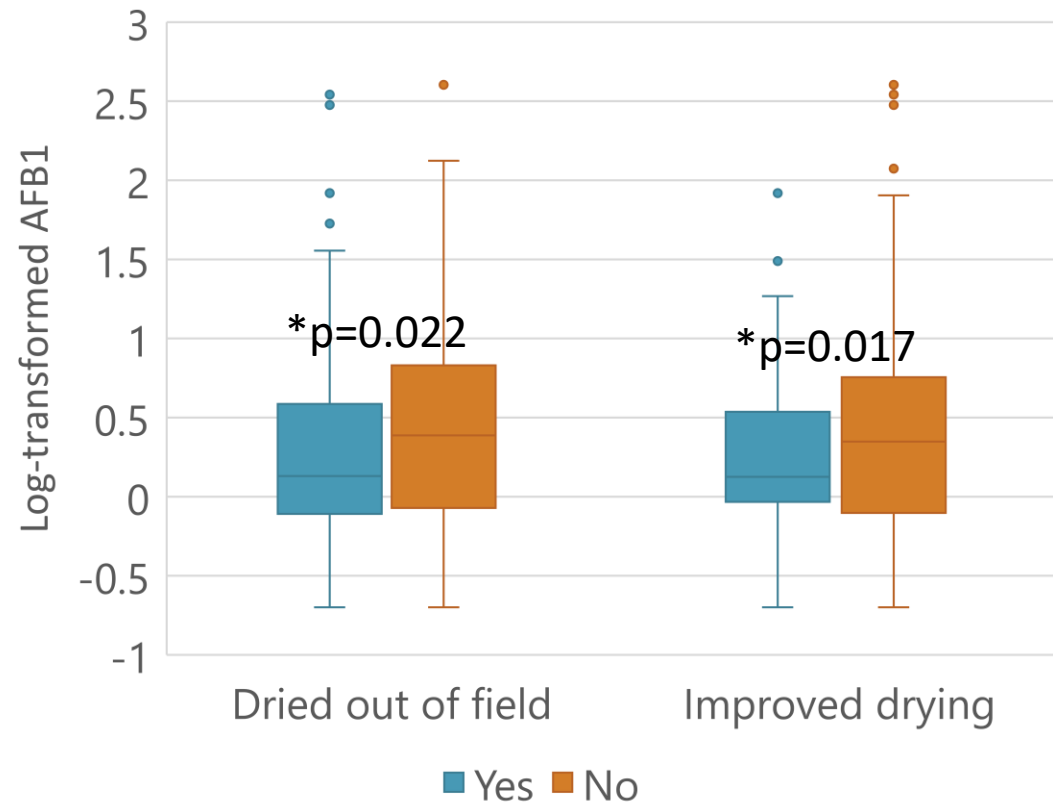

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Aflatoxin Levels and Maize Agricultural Practices

In maize-producing households, **lower aflatoxin levels were associated with:**

- Drying maize outside of the field (0.59 pg/mg albumin, $p=0.022$)
- Using improved drying methods (0.55 pg/mg albumin, $p=0.017$)

OLS models adjusted for clustering, age, household head's education level, and inter-cropping.

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Aflatoxin Levels and Groundnut Agricultural Practices

Children in groundnut-producing households with **improved drying methods had lower aflatoxin levels** (0.64 pg/mg albumin, $p=0.020$) compared to those in households with unimproved methods

OLS models adjusted for clustering, age, household head's education level, and inter-cropping.

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Conclusions

- Detectable levels of aflatoxin in 90% of children in our study
- Both children 6-23 months and 24-59 months have detectable aflatoxin
- High levels of anemia, malaria, and stunting
- Association between stunting and aflatoxin
 - Stronger relationship in older children
 - Complex relationship (age and body weight)
- Dietary consumption of groundnuts and cassava linked to aflatoxin
- Households with improved agricultural practices (maize and groundnuts) = lower level of aflatoxin)

GERALD J. AND DOROTHY R.
Friedman School of
Nutrition Science and Policy

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Strengths and Limitations

- Representative study of children under five in 10 districts of Nampula
- Use of robust markers and tools for the assessment of aflatoxin, growth, household characteristics
- Sample size not achieved due to unexpected circumstances in the field
- Our study did not have data available on cassava production and processing practices

GERALD J. AND DOROTHY R.
Friedman School of
Nutrition Science and Policy

FEED THE FUTURE

The U.S. Government's Global Hunger & Food Security Initiative

Policy Implications and Future Research

- Several initiatives targeting aflatoxin in different crops in Mozambique (particularly groundnut)
- Agricultural, post harvest interventions and policies targeting aflatoxin may want to consider the health effects in a vulnerable population such as infants and young children
- Study focused on rural areas- better understanding of exposure in urban areas is needed
- Emphasizes the need for enhancing multi-sectoral collaboration (agriculture, health and nutrition) around aflatoxin mitigation to improve health and well being, economy, productivity and self reliance
- Discussion around the potential of cassava being a source of contamination
